

## Autism Ontario

**Challenge 3:** Create a solution that streamlines the event creation process with the notification process.

Currently, Autism Ontario uses Eventbrite to create and manage events. However, these events are not integrated into the Autism Ontario website, which makes it difficult for individuals to find them and link the events back to the organization.

By having the events integrated into the website, they hope to strengthen advocacy efforts and work.

### Ideal Features:

- Must be integrated into new website (Drupal 8)
- Script or API that pulls from Eventbrite and adds to a calendar on the Autism Ontario website
- Needs to have varying levels of permissions
